FirstSources
Waste Solutions

Waste management that survives an audit.

Collection for industrial and commercial sites, and the products made from what we collect, at SIDCUL, Haridwar.

We collect	Cardboard and paper, rigid plastics, polythene and film, green waste, industrial ash, electronic equipment, used batteries
We make	EcoBricks, TerraPots, TerraVita compost, cattle feed

EcoBricks

Masonry units pressed from boiler and fly ash with an FSWS binder. The line is cold pressed and ambient cured, with no kiln, so no firing fuel is consumed.

Tested against IS 2185 (Part 1) and IS 12894

Results for a production lot are available on request. Tell us the specification you need met, and we confirm it against test.

TerraPots

Planters pressed from the same ash and binder mix as EcoBricks, in a range of shapes and sizes for gardens and landscaping. **Made to order, including larger runs.**

TerraVita

Made from

Green waste

Dry leaves

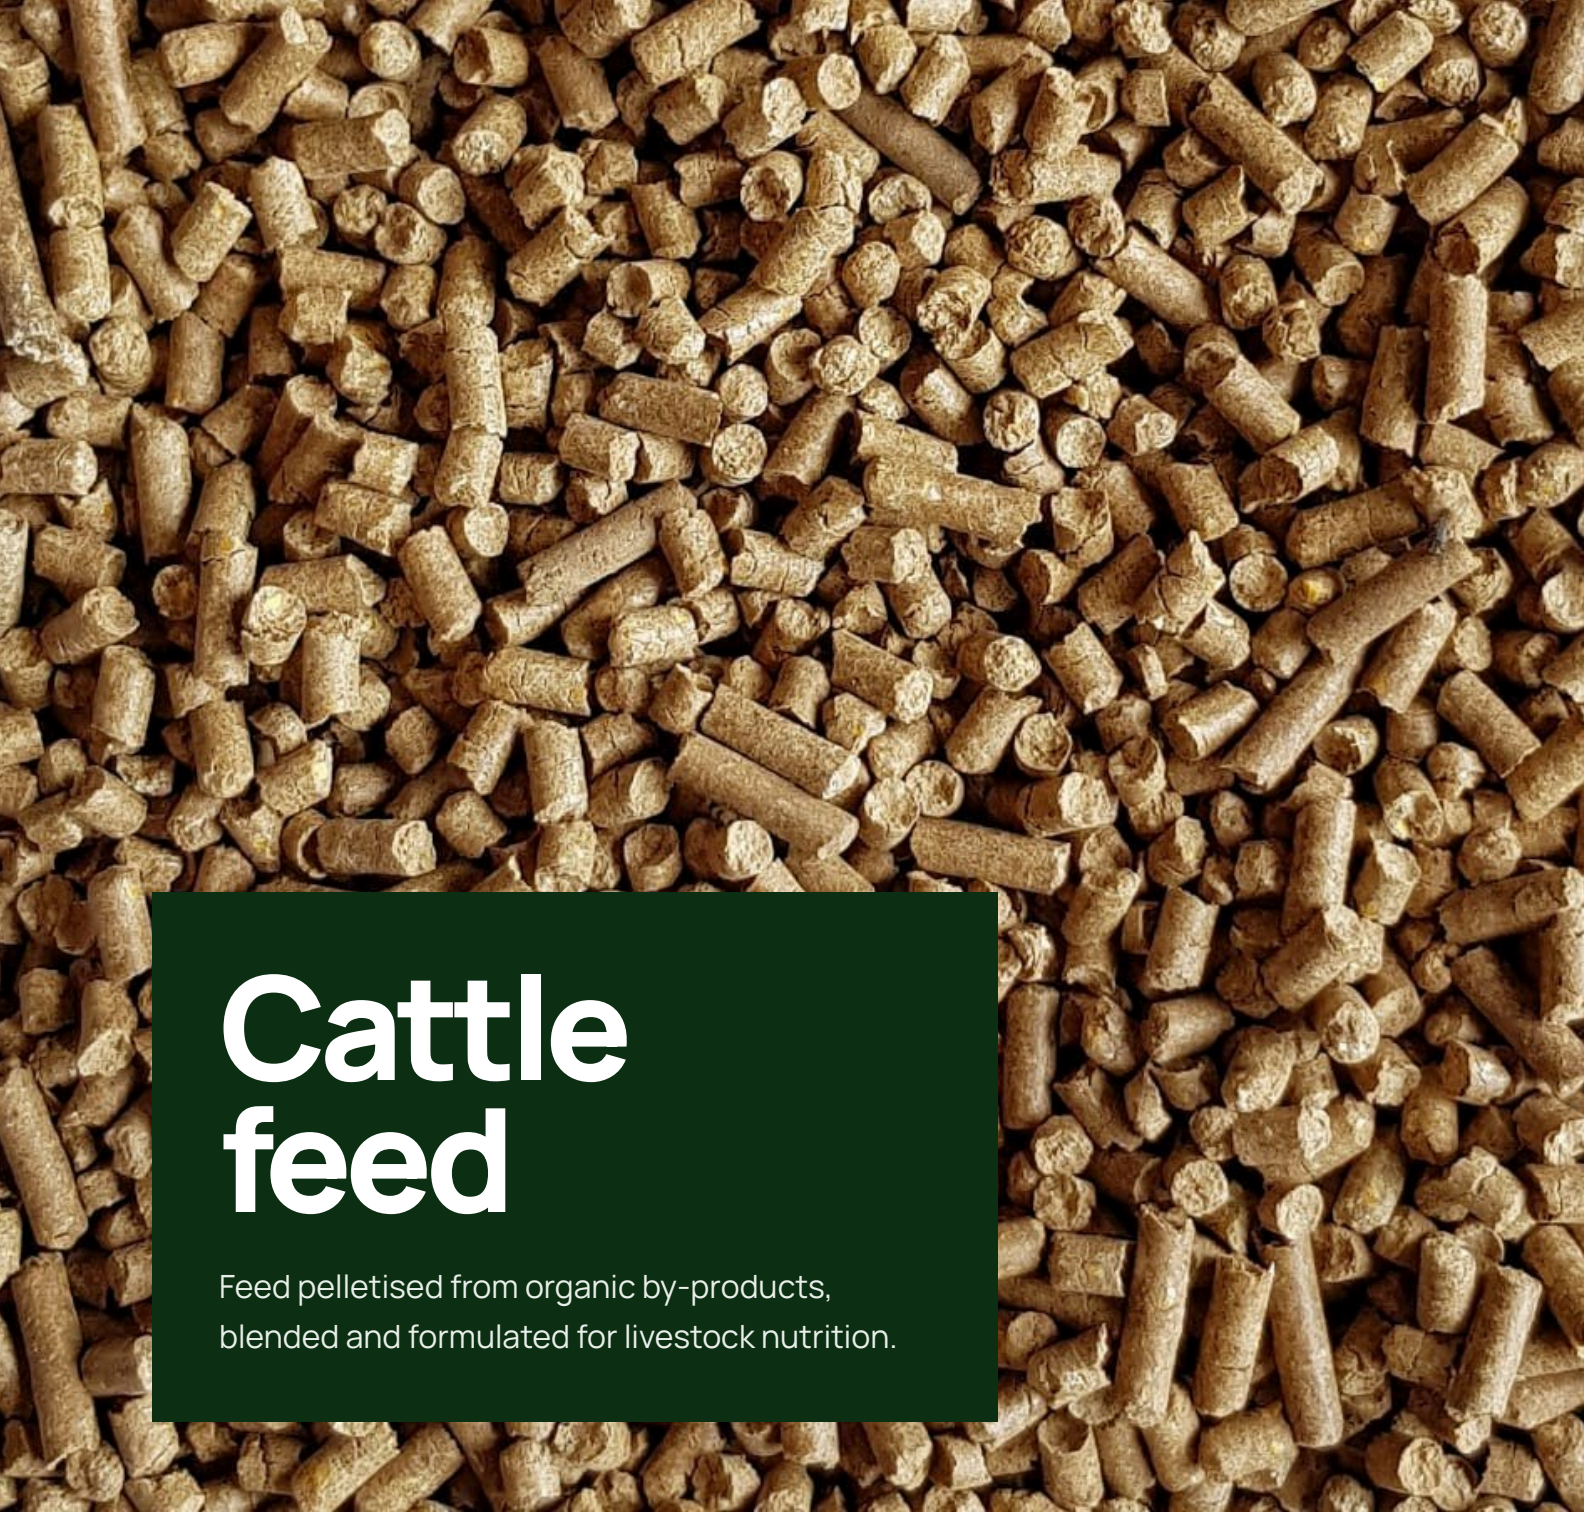

Cow dung

Canteen waste

TerraVita, as bagged at Haridwar.

Compost made at our Haridwar site. It is windrow composted with a proprietary bacterial culture, under the site's consent for composting.

Cattle feed

Feed pelletised from organic by-products, blended and formulated for livestock nutrition.

Buying any of the four

Supplied retail and in bulk, with recurring delivery where it suits. Tell us the quantity, the delivery point and how often you need it.

Waste management for industrial and commercial sites in Uttarakhand.

We collect from factories, plants and campuses, and run a consented processing site at SIDCUL, Haridwar. The company was incorporated in 2019. Ash and green waste are made into the products on the previous pages. Everything else goes to a named mill or registered recycler.

Collection and segregation	Scheduled collection from your site. Each consignment is weighed at your gate and again at Haridwar, then sorted to stream, with contaminants and moisture recorded by weight.
End-use certificates	A certificate for every consignment, issued by whoever did the recovery and tied to your gate weights. Where a mill or recycler did the work, theirs is forwarded to you unaltered.
Reporting	Weights by stream and by route (reused, recycled, recovered, disposed), per consignment or monthly. Anything that could not be recovered is reported, with the reason.
Electronic equipment and batteries	IT hardware, electronics and used batteries, graded for reuse, repair or spares, and otherwise passed to authorised recyclers.
Waste audits	A survey of what your site actually generates and where value is lost to poor segregation, so contracts are set against real composition.

Eight streams we collect, and where each one goes.

Cardboard and paper
Repulped by a paper mill into liner, fluting and carton board

Rigid plastics, end of life
Recycled granulate, by a registered recycler

Green waste
TerraVita compost

Electronic equipment
Repaired or upgraded for further use, or metals recovered by an authorised recycler

Rigid plastics, serviceable
Picked up, washed and put back into use as crates, drums and bins

Polythene and soft plastics
Recycled polyethylene, by a registered recycler

Industrial ash
EcoBricks and ash based masonry

Used batteries
Materials recovered by an authorised recycler

Green marks work done by FSWS at Haridwar, under its own consent. The rest is recovered by a licensed mill or recycler, which holds that licence.

Customers we have served

ITC Limited · Unilever · wipro · BHEL · SKF · EFS Facilities Services · Themis Medicare · and others

Consented to operate by the Uttarakhand Pollution Control Board.

A Consolidated Consent to Operate and Authorisation, granted by the Board's Regional Office in Roorkee on 24 April 2025 under the Water Act, the Air Act and the Hazardous Waste Rules. CAF ID 23387, application 2652160. A copy is provided on request.

600 MT/month
Composting

100 MT/month
Compacting and grinding of plastic waste

Tell us the site, the streams and the volumes. We will come back with a collection schedule and the route for each stream.
